Airframes: **Ecks 220**, **Ecks 0800 Mod**, **Ecks 0800 Sport**, **Ecks 1kg Mod**, **Ecks 1kg Sport**, **Rok's Quad**, **Ken's 450**, **Ken's Alpha**, **Ken's LadyBug**. Values in unified float format (radians for angles, volts, fractions).

Rate PID Gains

Rate Kp controls roll responsiveness; higher values = more aggressive. Rate Kd provides damping to reduce overshoot.

Param	Ecks 220	Ecks 0800 Mod	Ecks 0800 Sport	Ecks 1kg Mod	Ecks 1kg Sport	Rok's Quad	Ken's 450	Ken's Alpha

RollRateKd	0.0045	0.012	0.008	0.006	0.004	0.004	0.006	0.004

Angle PID Gains

Angle Kp controls attitude stiffness (return-to-level force). Ki eliminates steady-state error in hover. Int Limit caps the integrator windup.

Pitch Axis

Pitch rate and angle gains — symmetric to roll by convention on symmetric multirotors.

Yaw Axis

Yaw rate and angle gains — typically lower Kd than roll/pitch. Yaw angle is a weak hold, often overridden by heading-hold in navigation.

Navigation Gains

Pos Kp/Ki control position-hold stiffness. Vel Kp controls max correction velocity toward target.

Altitude Gains

Alt Pos Kp/Ki control altitude-hold response. These work on top of the cruise throttle feedforward.

Cruise & Limits

Cruise throttle is the hover feedforward baseline. Angle/rate limits cap max attitude and rotation speed. Battery capacity and low-voltage threshold set the FC's voltage monitoring.

- Ecks 220 is the original default from originaldefaults.h.
- Ecks 0800/1kg variants are manually tuned .af files in the GCS airframes directory.
